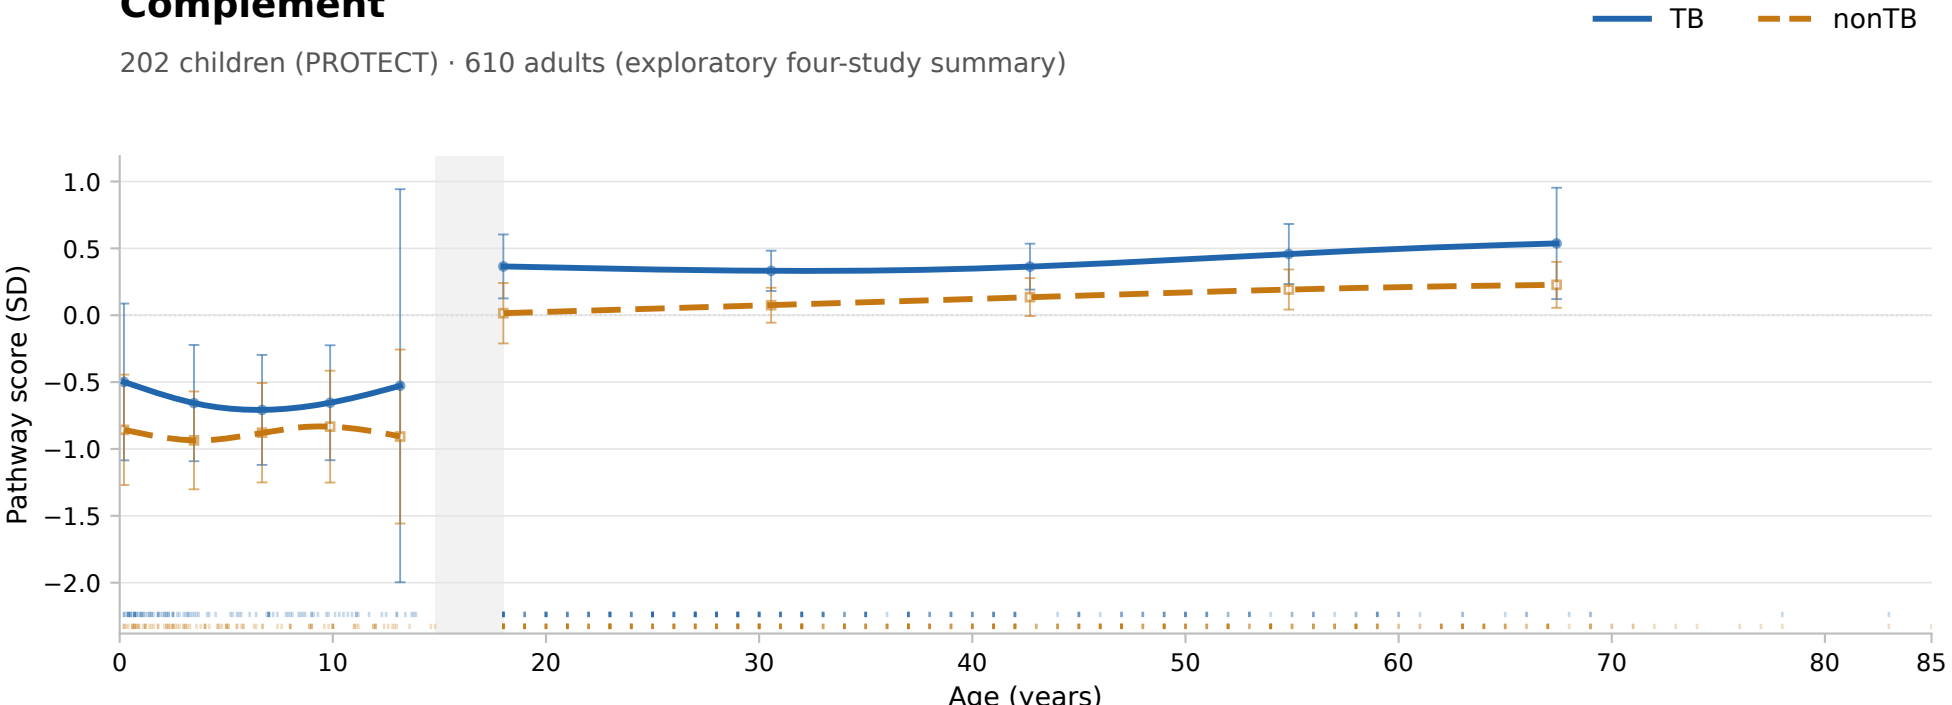
Complement

202 children (PROTECT) · 610 adults (exploratory four-study summary)



Fixed study mix + shared adult age shapes; leaving one study out shifts group levels by up to 0.62 SD.
Whiskers: pointwise 95% CIs, conditional on model assumptions. Ticks: patient ages. Grey gap: no participants.
Child and adult fits are separate; gaps stay unconnected. Cross-sectional age profiles, not within-person change.
